Quanos

AI Included in SCHEMA ST4

Four Ready-To-Go AI Tools as Standard.

AI that puts a fresh take on technical writing.

AI isn't the future anymore—it's a strategic success factor in the here and now. When you opt for the Quanos AI portfolio, you're integrating intelligent assistance functions directly in your authoring and information processes. The result for you is higher efficiency, consistent content, better-quality data, and permanent improvements to your information architecture as a whole.

And best of all, AI is now included in the standard version of ST4, without needing to purchase a separate module or add-on.

The four ST4 AI features shown in bold below are integrated directly into the authoring environment and do not need a separate contract with an AI provider to work. Processing is carried out in a certified cloud infrastructure in compliance with GDPR and ISO 27001 requirements with clear contractual policies covering all services used.

1

ST4 AI Jetpack

2

ST4 Cloud Authoring Assistant

3

ST4 AI Writer

4

ST4 AI Translator

ST4 AI Jetpack

Cloud-based AI solution for automated metadata assignment in SCHEMA ST4. Specially developed for technical writers.

- **Automated, precise metadata assignment based on content analysis**
- **Reduces manual sources of error**
- **Classification and structuring takes less time**
- **Option to expand with ST4 AI Jetpack plus for individual requirements**

ST4 Cloud Authoring Assistant

Intelligent quality assurance when creating documentation in real time.

- **Checks spelling, grammar and style as you write**
- **Flags up inconsistent or rejected terms and suggests a preferred term**
- **System automatically recognizes prohibited compounds without you needing to store them beforehand**
- **Authoring Memory recognizes similar text fragments while writing content and saves time and translation costs by letting you reuse previous formulations**

ST4 AI Writer

Powered by AI to transform technical content directly in ST4.

- **Formulates precise warning notices and instructions based on keywords, running text, and risk analyses**
- **Automatically converts passive wording into active voice while always communicating the technical content**
- **A shared prompt library matches the requirements to the sector and document type and ensures consistent, controlled results**
- **No need to use external chatbots as content is transformed within ST4 itself**

ST4 AI Translator

Optimize your translation workflows by using the power of AI to pre-translate content based on the DeepL translation service*.

- **Automatically pre-translates technical content**
- **Speeds up international provision of documentation**
- **More efficient translation processes**
- **Extends your reach with multiple languages**

* You will need to have your own DeepL account and save your API key in ST4. DeepL also provides GDPR-compliant processing contracts.

Your Quanos contact will be happy to answer any questions about our AI tools.
